

h1

a)

- strong passwords
- secure networks
- constant updates
- multi-factor authentication
- making sure the documents or links downloaded to the computer are accessible and supported by the network

b) Not targeted by a specific boogie man

Losses if breached

- risk 1: 10 million euros
- risk 2: three million euros
- risk 3: one million euros

Company	MORFÈ-magazine			
What are we working on?	subscriber database such as personal information, payment details, emails	digital content like pictures, documents	Brand reputation	
What can go wrong?	information leak to weaken trust between the brand and customers <i>1 risk</i>	account takeovers due to bad passwords or unsecured network <i>2 risk</i>	malicious advertisement to destroy the brand <i>3 risk</i>	paywall bypass and content scraping where steal content automatically

				and redistribute it <i>(this could fall under 1 risk)</i>
What are we going to do about it?	constant updates to fix software	every couple of months mandatory password changes	remove any unnecessary features which limit the entry points	minimize third party interaction
Did we do a good enough job?	Keeps hackers and other breachers away by making it harder for them to breach the system	less access points to breaches inside and outside the company	protects the magazine from attacks through multiple lanes	protects the magazine from attacks through the third party specifically if it is breached and it spreads to companies working with them
